

**AGRICULTURAL CROPS
AND LIVESTOCK
1993/94**

MAHAWELI SYSTEM "H"

LIBRARY COPY

Department of Census and Statistics

Ministry of Finance, Planning, Ethnic Affairs and National Integration

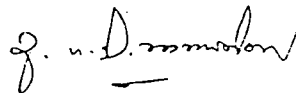

Preface...

A survey on Agricultural crops and Livestock was undertaken by the Department covering seven provinces other than North and East during 1992/93 and 1993/94 Maha seasons. It has been decided to treat the Mahaweli System "H" as a separate domain in this survey and disseminate information at Units and Block levels for the purpose of future planning and also to evaluate the progress hitherto, in the field of agriculture in the System "H". Although, this was defined as a Survey, it could be considered a "Mini Census" as all the agricultural parcels growing crops excluding paddy were listed and enumerated in the survey operation.

The planning, execution, and successful conclusion of the entire survey operation was performed by the staff of Agriculture division of the Department, under the close guidance and supervision of Mr. A.M.U. Dissanayake, Deputy Director in-charge of Agriculture Statistics division.

I wish to express my thanks to Statisticians namely; Ms. D.D.M.V. Perera, Mr. A. J. Satharasinghe, and Mr. J. Dodangoda who were responsible for the execution of different activities of the survey such as design of questionnaires and instruction manuals, training of Technical staff, data processing, etc, and Mrs. K.G.A. Bambarenda, Statistician and Mr. G.W. Liyanage, Senior Agronomist of the Mahaweli Authority for their valuable assistance and co-operation extended through out the survey process.

I am confident that the information presented in this report will be of immense help to planners and policy makers.

A.G.W. Nanayakkara
Director of Census & Statistics.

Dept. of Census & Statistics,
No. 6. Albert Crescent,
P.O.Box 563.
Colombo. 7.
17 March 1995.

Acknowledgement .

Many people have contributed for the successful completion of this survey in various phases. Therefore, my grate appreciation is due to all those who were responsible for the smooth conduct of the survey. It is not practical to mention their names individually. However, some major contributions are mentioned here.

The Director General, and Managing Director of the Mahaweli Authority, Resident Project Manager (RPM) and Mr. Nandalal Jayasundara, then Acting Deputy Resident Project Manager Agriculture (DRPM), Block Managers (BMM) of the Mahaweli System "H" who made available the valuable services and co-operation of their supporting staff.

Unit Managers (UMM) and Field Assistats (FAA) played the key role in data collection by visiting house-holds and enumerating them in the capacity of primary reporters of the survey.

Statistical Officer in the Statistics Branch stationed in Mahaweli System "H" Mr. D.M.P.B. Dissanayake and his team of Statistical Investigators namely: Mr. M. Somatilake, Mr. J.M.S.V.B. Jayamaha, and Mr.G.D.P.T. Gunatilake were responsible for training, supervision and to provide the technical guidance to field staff in their respective Divisions.

Statistical Investigators of the Agriculture Division who carried out coding and data entry work namely: Mr. P. Mahadevah, Ms. Padmika Walpita, Mr. N.T.T. Warapitiya, Ms. M.D.M. Srikanthie, Ms. C. Hettiarachchi and Mr. H.A. Ratnasiri under the supervision of Statistical Officer Mr. J.A.D.B. Jayasooriya.

Mr. K.D. Siripala, Deputy Director of Printing division and his team of staff for printing of this report in a short notice.

Chapter 1

Survey on Agricultural Crops and Livestock - 1993/94

1.1 Background:

Recent trends in the concept of development planning, specially for rural sector, where source of livelihood heavily depend on Agricultural sector, emphasize the need for reliable statistical information disaggregated at lower administrative division levels. In this respect the emphasis has been made for more detailed information on land utilization associated with seasonal and minor export crops and their production levels. The importance for these statistics have been growing more rapidly as a mean of poverty alleviation programs as well. These needs have made to adopt for more systematic and rational approaches for the data collection on Agricultural Crops and Livestock.

The collection of information on perennial crops such as Tea, Rubber and Coconut is much easier and are readily available as a result of nature of the growing pattern of these crops and the management. Reliable and up-to-date information pertaining to these crops are also available through the means of Administrative records and Censuses. However, collecting reliable statistical information on other agricultural crops such as seasonal crops, fruit crops, minor export crops etc. has become a difficult and costly task due to scattered nature of many of these crops.

The nature of growing conditions of crops other than Tea, Rubber and Coconut do not permit to gather reliable information even through Agricultural Censuses. Therefore, such information could collect only through well defined objective survey operations. In spite of these difficulties, the Department felt the increasing need for more realistic information on these crops which play a crucial role in the agricultural economy of small farmers and to fulfill the following objectives, the survey on Agricultural crops & livestock has been carried out during Maha Season 1993/94 in Mahaweli System "H".

1.2 Objectives:

- (a) To collect and provide up-to-date information on Agricultural crops and livestock at Grama Niladari (GNN) division/UM and village level which are needed for planning at lower administrative levels.
- (b) To establish a frame on Agricultural crops growing and livestock rearing parcels, in order to conduct objective surveys that are expected to be undertaken in the future.
- (c) To make available the benchmark data needed to monitor the progress of the agricultural development programs that are being implemented by the Government.

1.3 Methodology

The survey operation could be considered as a "Mini Census" since all the parcels growing Agricultural crops and rearing livestock during the reference period, were listed and enumerated.

1.3.1 Reference period:

The reference period for the survey was Maha Season of 1993/94 (i.e. September 1993 - to April 1994).

1.3.2 Scope and Contents:

All the parcels growing Agricultural crops other than wet land paddy, were enumerated and listed in a special register. The extent under each crop, number of trees, creepers or bushes when the extends cannot be given, number of cattle and buffaloes were recorded. It was also recorded whether the parcel is a homegarden or not.

Asweddumized paddy parcels were excluded in this survey. However, if there were asweddumized paddy parcels cultivated with Agricultural crops, other than paddy during the reference period, such parcels were enumerated to determine the crop acreage for the Maha Season 1993/94.

1.3.3 Enumerators:

Unit Managers (UMM) of their respective divisions were the enumerators in this survey.

1.3.4 Field Organization

The Statistical Staff attached to Mahaweli System "H" provided the training and technical guidance to enumerators (UMM) and Field Assistants under the administrative control of Block Managers (BMM) and Resident Project Managers (RPMM) of Mahaweli Economic Agency (MA). They were working under the Overall supervision of a Deputy Director of the Department of Census & Statistics in collaboration with the Statistician, and Senior Agronomist of the MA who coordinated the survey activities.

1.4 Concepts and Definitions

Some of the main concepts and definitions used and the method of determination of the area under crops are described below.

1.4.1 (a) Agricultural crops refers to all perennial crops and seasonal crops grown in the parcels.

1.4.2 Parcel : is defined to be a piece of land cultivated either singly or jointly and is separated by a similar land cultivated by other cultivators or a water way, public road, boundary, fence or other such limits. This could be a land cultivated at the time of data collection or prepared for cultivation during the season, irrespective of legal ownership.

1.4.3 Home Garden

- (a) A parcel of land extent which is less than or equal to 20 perches having some form of cultivation/tends livestock and has a dwelling house was defined to be a homegarden.
- (b) A parcel of land which is more than twenty perches having some form of cultivation and/or rearing livestock was also defined as a homegarden, if the following two conditions are fulfilled.
 - (i) It has a dwelling house.
 - (ii) The produces of the parcel is mainly used for home consumption.

1.4.4 Extent under Crops:

In most parcels in Sri Lanka, the general pattern is mixed cropping. Even in large plantations, there are instances where mixed cropping has been under taken. Thus, estimating the acreage under various crops poses serious problems to the enumerator. This is specially so when numerous varieties are haphazardly grown in a parcel. The problem is further aggravated as the density of the mixed cropping vary from parcel to parcel. In keeping those features in mind the following methods of estimation procedures have been used to give the extent in the case of mixed cropping.

- (a) Method of total area allocated to principal crops.
- (b) Equal fraction for each mixed crop.
- (c) Estimating the area based on number of plants.

for example, Rubber and Cocoa are planted in a 10 acre plot (parcel) wholly and if it contains the recommended number of trees per acre for both the crops, the enumerator was instructed to record 10 acres for Rubber and 10 acres for Cocoa as well.

Sometimes the enumerators were not able to give the extent under each crop separately when a number of crops are being cultivated in one parcel. In such instances they were instructed to count the number of trees, creepers or bushes grown in the parcel and the extent under each crop was estimated with the help of the table given below and the other crops based on the general knowledge of the farmers in respect of their divisions.

Recommended No. of trees, Creepers or Bushes for an acre

Code No.	Crop	Recommended No.	Code No.	Crop	Recommended No.
15	Manioc	4,800-6,000	55	Arecanut	1,200
42	Rubber	160- 200	57	Plantain	300
43	Coconut	60	58	Papaw	450
44	Cocoa	450	59	Pineapples	14,000
45	Coffee	450	60	Oranges	100
46	Cinnamon	3,000	61	Mangoes	30
50	Pepper	680	62	Avacadopears	100
51	Cardamoms	600	63	Limes	200
52	Cloves	100	64	Passionfruit	500
53	Nutmeg	80	65	Jackfruit	20-25
54	Cashew	35	66	Breadfruit	30
			70	Betel	6,000

1.4.5 Tabulations:

The enumerators have been instructed to prepare a summary sheet based on the information collected on number of homegardens, acreage under important crops grown in their divisions and number of neat cattle and buffaloes. Arrangements are being made to release the information from summaries to the users early in order to meet their data needs. More detailed tabulations will be made available later.

1.5 Main Data:

This report present the basic information by unit Managers and Block managers Divisions and in the Mahaweli "H" System based on the summary information prepared by UMM.

1.5.1 The following informations are given in four major tables.

- (a) Number and extent of agricultural parcels and number of homegardens.
- (b) Extent under seasonal crops.
- (c) Extent under perennial crops.
- (d) Number of cattle and buffaloes.

1.5.2 If the reported extent under any crop for the entire Mahaweli System "H" is reported to be less than 5 hectares was not taken into tabulations when the data for UM divisions are presented. However those extent have been shown when the data for Block Managers Divisions and the system are presented.

1.5.3 Seasonal Crops:

Kurakkan, Maize, Sorghum, Meneri, Green gram, Cowpea, Soyabean, Black Gram, Dhal, Gingelly, Ground Nuts, Manioc, Sweet Potatoes, Potatoes, Red Onions, Big Onions, Chillies, Mustard, Ginger, Tumeric, Tobacco (Cigarette/Beedi/Cigar/Chewing) Cotton, Mulbery, Leafy vegetables, Gherkin.

1.5.4 Perennial Crops:

Tea, Rubber, Coconut, Cinnamon, Coffee, Cocoa, Pepper, Cardamom, Cloves, Nutmeg, Arecanut, Cashew, Oranges, Limes, Mangoes, Jak, Bread-fruit, Sugar-cane, Goraka, Tamarine, Plantain, Papaw, Pineapple, Passion-fruit, Betel, Kitul, Wood-apple, Beli, Pomegrenate(Delum), Rambutan, Amberella, Mangosteen, Grapes, Drumstick, Palm, Durian, Pears.

The crops that are not included in the above were treated under "other" category.

Chapter 2

System "H" in Mahaweli Development Programme

2.1 Introduction:

The Mahaweli Development Programme is known to be one of the largest multipurpose development programme undertaken not only in Sri Lanka but also in the south east Asia. The Implementation of this programme was originally assigned to the Mahaweli Development Board established by the legislative act no. 14 of 1970. Although, feasibility surveys, design of plans and official inauguration etc. have taken place in 1960's and early part of 1970's, in 1977 this programme was accelerated with a view to find solution to the growing unemployment problem, higher demand for energy, increase the level of food production, etc.

By end of 1992, an extent of about 69,260 hectares have been brought under irrigated agricultural development within Mahaweli systems H, B, C, and G. System "H" is first and the largest area developed under the Mahaweli Development Programme. The largest portion lies in the administrative district of Anuradhapura and extends to Matale and Kurunegala districts marginally. Settlement of farm families and provision of infrastructural facilities have reached final stage specially in the "H" system and in few others. The "H" system consists of 24,710 hectares of newly irrigated lands and 6,450 hectares of irrigated land developed under the old settlement scheme of Kandalama and Maha Illuppallama.

By the end of May 1994, 31,790 settlers have been settled in the system "H" out of which 24,088 are farm-families and 7,702 are non-farming families.

2.2 Paddy Statistics:

Out of the total irrigated area of 31,160 hectares in the whole "H" system 25,439 hectares or 62,861 acres have been irrigated for the purpose of paddy cultivation in the system "H" excluding Maha Illuppallama and Kandalama. The extent sown reported under paddy in 1993/94 Maha was 24,058 hectares in this area. During Yala seasons the extent utilized for paddy cultivation is comparably lower than that of maha seasons due to insufficient water. Therefore, a significant portion is being devoted to Chillies, Big-onion, and vegetable cultivation.

The Collection and compilation of agricultural statistics mainly extent under paddy cultivation and estimation of Average yields per hectare or acre by cultivation seasons are performed by the Department of Census and Statistics (DCS) with the assistance of the field staff of Mahaweli Authority (MA). DCS is responsible for the designs and technical operations of the surveys while the field staff of the MA is entrusted with data collection activities. The extent under paddy is determined on the basis of complete enumeration of all the paddy growing parcels while the average yield is estimated through a systematically designed crop cutting survey. Some of the information thus collected and disaggregated at block level in Mahaweli "H" system is depicted in the section 2.

2.3 Highland Crops and livestock:

The cultivation of number of crops other than paddy and rearing livestock are also taken-place integrated with other farming activities in the area. Cultivation of other crops are also in operation under irrigated environment or purely under rainfed conditions. The land area of equivalent to 1/2 acre has been allocated to each settler to enable them to build a dwellings house and other domestic purposes. In these lands surrounding their dwellings have been devoted to number of permanent crops mainly coconut and some time semi-permanent crops or seasonal crops depending on the nature of the land suitable for such crops.

There is no regular and objective method in operation to determine the extent under these crops and number of livestock. The regular feature is that the data are being collected through a subjective approach ie. based on the guess-estimates or personnel judgements. It has been reported that the MA had encouraged the farmers to promote the levels of productions specially in the highlands by way of distributing seedlings, plants, etc., pertaining to different crops and also hi-bred species of livestock, time to time as a part of their development programmes. However, the existing area of these crops and the number of livestock are reliably not known.

DCS has initiated a special programme to collect such information covering provinces other than north and east in the Island. So, the MA has requested DCS to extend this statistical operation to Mahaweli "H" System also. In this exercise the system had been treated as separate domain and the information were collected by Unit Managers in their area of jurisdiction covering Maha season 1993/94. The information thus collected are given in this report. However, it should be noted that during this survey operation, the paddy extent have not been enumerated unless they were utilized to cultivate other field crops other than paddy during the reference period. There the number of parcels (table 1) refers to the all lands investigated growing field crops including encroached lands, L.D.O & C.L.O. lands irrespective of legal ownership.

Note: Although the survey on Agricultural crops and livestock 1993/94 has not been designed to collect paddy statistics and other social information, considering the users needs, the paddy statistics collected in a separate exercise by DCS and other information related to infrastructure obtained from MA are given in this section.
