DEPARTMENT OF CENSUS AND STATISTICS

Preface

This brief report is prepared based on the information collected through the Census of Agriculture 2002 conducted by the Department of Census & Statistics. The evidences are there that the Coconut cultivation in Sri Lanka dates back prior to B.C. This is the largest perennial crop grown in the country by extent and it spreads over 1 million acres. The aggregate extent could be ascertained in few months time when this series of district-wise reports are concluded. It is not an easy task to determine the absolute extent under coconut as this crop synonymous with complicated nature of growing patterns. However, an effort has been made to estimate them considering with different patterns and given in this brief issue by DS/AGA divisions and GN divisions.

The total extent under Coconut reported in Kalutara District at the Census of Agriculture 1982 was 30,536 acres (about 12,358 hectares) including the extent covered by scattered trees. The corresponding extent reported in the Census of Agriculture 2002 is about 27,509 acres (11,133 hectares). As such, the drop of Coconut area reported to be about 10 percent or 3,027 acres (1,225 hectares) in Kalutara district compared to 1982.

My sincere appreciations are due to Statistical Officer Ms. M.D.M. Srikanthie who volunteered to prepare Statistical tables of this document under the supervision of Ms. D.D.M.V. Perera, Senior Statistician and overall guidance of Mr. A.M.U. Dissanayake, Director in-charge of the Agriculture and Environment Statistics Division of the Department.

I hope this report would be of immense help to the planners especially who are working in the agencies related with the development of Coconut cultivation in Sri Lanka.

A.G.W. Nanayakkara
Superintendent of Census and
Director General of Census & Statistics

List of Publications of Census of Agriculture - 2002	27

INTRODUCTION

1. **Background:** The statistical information given in this document is based on the data collected through the Census of Agriculture conducted in the year 2002. The Census of Agriculture is an Island-wide operation for the collection and derivation of statistical information on the Country's agricultural structure, using "Agriculture Holding" as the unit of enumeration. The entire operation is carried out under the Census Ordinance by the Government of Sri Lanka.

Coconut is the second largest crop grown in the country. In extent it is next to the staple food crop "rice". The aggregate extent under Coconut in the country for the Census year 2002 is not yet determined and will be published soon. However, the Coconut extent reported for the year 1982 according to Census of agriculture of that year was about 1,028,562 acres (416,422 hectares). To analyze the complete set of information collected through the Census of Agriculture - 2002 relating to about 1.8 million operational holdings above ¼ acre in extent would take some time. Therefore, to serve immediate needs of users, some important variables collected at the Census relating to the small holding sector was extracted with the help of Enumerators and published in a district-wise series of publications.

Due to the factors such as urbanization, opening up of new industrial ventures, fragmentation of holdings, crop diversification, absence of operators on the holdings due to unsettle condition that prevailed specially; in the districts of North and East, one would expect a wide variation on the extent under Coconut compared with the previous Census of Agriculture 1982. As mentioned above due to one reason or other, these variations would be seen in many localities. However, the general feeling is that the Coconut crop has not declined sizably over the time due to land fragmentation because; the people tend to plant Coconut plant in their homesteads as replacement for other crops. Similarly, large holdings where Coconut was in compact cultivation, after fragmentation would have been converted homesteads with scattered Coconut trees. This situation could be evaluated when this district-wise publication on the Status of Coconut Cultivation is completed.

2. **Data:** In this Census, the scope and content was mainly focused on the items such as (a). Agricultural Holdings, (b). Agricultural Operators, (c). Crop Extent, (d). Livestock numbers, (e). Land utilization, and (f). Agricultural machinery and equipment.
3. **Method of Data Collection:** For the operational point of view the entire agricultural sector in the country was divided in to two sectors namely, (a) Estate or large holdings (b). Small Holdings.
 - Estate Sector was defined as operational holdings or units of 20 acres or more in extent operated by an Individual or group of persons under one operational status, such as on own account, in-partnership, for a private person, or for an institution. In the instances where different parcels of the holding may add up to 20 acres or more, if so it was not considered an Estate. Estate should have at least one parcel of which the extent 20 acres or more.

- Small Holding Sector was defined as all holdings, which are not falling into the category of estates.

The trained Enumerators visited each and every census unit in order of the list of Housing units, Institutions, Collective living quarters, and Non-housing units and screened out for Agricultural Operators through a schedule known as "AC 1." They have been instructed to conduct personal interviews with respective operators and collect the specific information required for this Census. While in respect of the estate sector, the information was collected through a mail questionnaire, which was addressed to every Estate Operator/Superintendent in accordance with the inventory of Estates prepared prior to the Census.

4. **Content in this document:** The data relating to Coconut cultivation which was collected at the census have been summarized and given here. They appear as follows.

Small Holding Sector:

- Extent of land (holdings) reported less than or equal to 40 perches (1/4 of an acre) having agricultural output mainly for home consumption: As these are very marginal land for the agricultural point of view, extent under a particular crop cannot be determined. Therefore, the Enumerators were instructed to report the basic information like number of trees/Bushes/creepers as appearing in those holdings with out going in to detail classifications. In respect of Coconut the information was collected on the followings.
 - (a). Number of Coconut trees (b). Number of King-coconut trees (both irrespective of production status).
- Holdings reporting extent more than 40 perches (1/4 of an acre) or producing agricultural output mainly for sale irrespective of land extent. The information was collected on the followings.
 - (a). Extent under Coconut viz. In-production, Not yet in-production
 - (b). If an extent under Coconut cannot be determined, then Number of scattered trees in-production, not yet in-production
 - (c). Number of King-coconut trees.

Note: Coconut extent by age was also collected but not analyzed here. However, they will be published in due course.

Estate sector:

- Similar information as in holdings above 40 perches.

(5). Limitations: It is important to note that the data given here on small holding sector by Grama Niladari divisions are based on the residence of the operators but not according to location of such holdings. However, at Divisional Secretariat division levels it is assumed that the difference between extent according to Operators' Residence and location of such holding are to be very marginal.

A Brief Review

Kalutara administrative district comprised with land area of about 389,430 acres (157,600 hectares) excluding inland waters. According to the Census of Agriculture 1982, there were about 255,540 acres (103,416 hectares) under agricultural activities which is about 65.6 percent of the total land area in the district. The extent under agriculture reported at the Census of Agriculture 2002 is 219,007 acres (88,631 hectares). This is about 56.2 percent of the total land area in the district and the decrease of agricultural area during last 20 years is about 14.3 percent. The total population enumerated in the Census of Population 1981 was 829,704 while the corresponding figure at the Census of Population 2001 is 1,060,800 and this is an increase of about 27.8 percent during 20 years period.

Table: Population in 2001 and Extent under Agriculture in 2002

(1). Census of Population and Housing 2001 (2). Census of Agriculture 2002
(3). Asweddumized Paddy Extent reported in PI for Maha Season 2001/2002

The predominant crop cultivated in Kalutara district is Rubber extending over about 73,937 acres (23,922 hectares) and it contributes to about 34 percent of the total area under agriculture. The other important crops cultivated in the district in order of extent are Paddy extending over 44,110 acres (17,851 hectares), Coconut 27,509 acres (11,133 hectares) and Tea 17,461 acres (7,066 hectares). These four crops are contributed to about 74 percent of the area under agriculture in Kalutara district.

According to the Census of Agriculture 1982, reported extent under Coconut was about 30,536 acres (12,358 hectares). Coconut extent in the district has shown a drop of about 10 percent during the last two decades. About 95 percent of the coconut acreage is found to be under small holdings and 48 percent of the Coconut area in the district is concentrated in five DS divisions namely; Horana, Kalutara, Beruwala, Panadura and Bandaragama.

About 75 percent of the Coconut area is matured and giving yield while the balance 25 percent is reported to be not yet in production

** Includes the estimated area covered by Scattered Coconut trees and excludes King Coconut

Estimation Procedure – Extent under Coconut**Extent In-production:**

Small Holding Sector: This consists of three components	
Item	Extent (acres)
<ul style="list-style-type: none"> • In the holdings more than $\frac{1}{4}$ acre where the extent under coconut can be reported in acres • In the holdings more than $\frac{1}{4}$ acre where the extent under coconut cannot be determined but number of trees were reported. Then the extent has been computed dividing the number of trees by 60. (Assumed that the number of trees cultivated per acre is 60). • In the holdings less than or equal to $\frac{1}{4}$ acre where the extent under coconut cannot be determined but number of trees were reported irrespective of status of production. Then the similar proportion of trees in-production and not yet in-production reported in the holdings more than $\frac{1}{4}$ in the same DS Division was used to estimate the number of trees in that category and divided by 60 to derive the extent. 	<p style="text-align: center;">a1</p> <p style="text-align: center;">a2</p> <p style="text-align: center;">a3</p>
<p style="text-align: center;">Estate Sector: This consists of two components</p> <ul style="list-style-type: none"> • In the estate sector holdings where the extent under coconut can be reported in acres • In the estate holdings where the extent under coconut cannot be determined but number of trees were reported. Then the extent have been computed dividing the number of trees by 60. 	<p style="text-align: center;">a4</p> <p style="text-align: center;">a5</p>
<p>Likewise the total extent for a particular DS division was determined by taking the sum of above components i.e. $(a1+a2+a3+a4+a5)$.</p> <p>Similarly the extent under not yet in-production was also computed.</p>
