

**STATUS OF
COCONUT CULTIVATION IN
BADULLA DISTRICT
2002**

A Publication based on Census of Agriculture

DEPARTMENT OF CENSUS AND STATISTICS

1H854

Preface

This brief report is prepared based on the information collected through the Census of Agriculture 2002 conducted by the Department of Census & Statistics. The evidences are there that the Coconut cultivation in Sri Lanka dates back prior to B.C. This is the largest perennial crop grown in the country by extent and it spreads over 1 million acres. The aggregate extent could be ascertained in few months time when this series of district-wise reports are concluded. It is not an easy task to determine the absolute extent under coconut as this crop synonymous with complicated nature of growing patterns. However, an effort has been made to estimate them considering with different patterns and given in this brief issue by DS/AGA divisions and GN divisions.

The total extent under Coconut reported in Badulla District at the Census of Agriculture 1982 was 2,186 acres (about 885 hectares) including the extent covered by scattered trees. The corresponding extent reported in the Census of Agriculture 2002 is about 8,915 acres (3,608 hectares). As such, a fourfold increase has been reported in the Coconut extent in Badulla District compared to 1982.

My sincere appreciations are due to Statistical Officer Mr. S. Teivaseelan who volunteered to prepare Statistical tables of this document under the supervision of Ms. D.D.M.V. Perera, Senior Statistician and overall guidance of Mr. A.M.U. Dissanayake, Director in-charge of the Agriculture and Environment Statistics Division of the Department.

I hope this report would be of immense help to the planners especially who are working in the agencies related with the development of Coconut cultivation in Sri Lanka.

A.G.W. Nanayakkara
Superintendent of Census and
Director General of Census & Statistics

INTRODUCTION

1. **Background:** The statistical information given in this document is based on the data collected through the Census of Agriculture conducted in the year 2002. The Census of Agriculture is an Island-wide operation for the collection and derivation of statistical information on the Country's agricultural structure, using "Agriculture Holding" as the unit of enumeration. The entire operation is carried out under the Census Ordinance by the Government of Sri Lanka.

Coconut is the second largest crop grown in the country. In extent it is next to the staple food crop "rice". The aggregate extent under Coconut in the country for the Census year 2002 is not yet determined and will be published soon. However, the Coconut extent reported for the year 1982 according to Census of agriculture of that year was about 1,028,562 acres (416,422 hectares). To analyze the complete set of information collected through the Census of Agriculture - 2002 relating to about 1.8 million operational holdings above $\frac{1}{4}$ acre in extent would take some time. Therefore, to serve immediate needs of users, some important variables collected at the Census relating to the small holding sector was extracted with the help of Enumerators and published in a district-wise series of publications.

Due to the factors such as urbanization, opening up of new industrial ventures, fragmentation of holdings, crop diversification, absence of operators on the holdings due to un settle condition that prevailed specially, in the districts of North and East, one would expect a wide variation on the extent under Coconut compared with the previous Census of Agriculture 1982. As mentioned above due to one reason or other, these variations would be seen in many localities. However, the general feeling is that the Coconut crop has not declined sizably over the time due to land fragmentation because; the people tend to plant Coconut plant in their homesteads as replacement for other crops. Similarly, large holdings where Coconut was in compact cultivation, after fragmentation would have been converted homesteads with scattered Coconut trees. This situation could be evaluated when this district-wise publication on the Status of Coconut Cultivation is completed.

2. **Data:** In this Census, the scope and content was mainly focused on the items such as (a). Agricultural Holdings, (b). Agricultural Operators, (c). Crop Extent, (d). Livestock numbers, (e). Land utilization, and (f). Agricultural machinery and equipment.
3. **Method of Data Collection:** For the operational point of view the entire agricultural sector in the country was divided in to two sectors namely, (a) Estate or large holdings (b). Small Holdings.
 - Estate Sector was defined as operational holdings or units of 20 acres or more in extent operated by an Individual or group of persons under one operational status, such as on own account, in-partnership, for a private person, or for an institution. In the instances where different parcels of the holding may add up to 20 acres or more, if so it was not considered an Estate. Estate should have at least one parcel of which the extent 20 acres or more.

- Small Holding Sector was defined as all holdings, which are not falling into the category of estates.

The trained Enumerators visited each and every census unit in order of the list of Housing units, Institutions, Collective living quarters, and Non-housing units and screened out for Agricultural Operators through a schedule known as "AC 1." They have been instructed to conduct personal interviews with respective operators and collect the specific information required for this Census. While in respect of the estate sector, the information was collected through a mail questionnaire, which was addressed to every Estate Operator/Superintendent in accordance with the inventory of Estates prepared prior to the Census.

4. **Content in this document:** The data relating to Coconut cultivation which was collected at the census have been summarized and given here. They appear as follows.

Small Holding Sector:

- Extent of land (holdings) reported less than or equal to 40 perches (1/4 of an acre) having agricultural output mainly for home consumption: As these are very marginal land for the agricultural point of view, extent under a particular crop cannot be determined. Therefore, the Enumerators were instructed to report the basic information like number of trees/Bushes/creepers as appearing in those holdings without going into detail classifications. In respect of Coconut the information was collected on the followings.
 - (a). Number of Coconut trees (b). Number of King-coconut trees (both irrespective of production status).
 - Holdings reporting extent more than 40 perches (1/4 of an acre) or producing agricultural output mainly for sale irrespective of land extent. The information was collected on the followings.
 - (a). Extent under Coconut viz. In-production, Not yet in-production
 - (b). If an extent under Coconut cannot be determined, then Number of scattered trees in-production, not yet in-production
 - (c). Number of King-coconut trees.

Note: Coconut extent by age was also collected but not analyzed here. However, they will be published in due course.

Estate sector:

- Similar information as in holdings above 40 perches.

- (5). **Limitations:** It is important to note that the data given here on small holding sector by Grama Niladari divisions are based on the residence of the operators but not according to location of such holdings. However, at Divisional Secretariat division levels it is assumed that the difference between extent according to Operators' Residence and location of such holding are to be very marginal.

A Brief Review

Badulla administrative district comprised with land area of about 698,552 acres (282,700 hectares) excluding inland waters. According to the Census of Agriculture 1982, there were about 242,598 acres (98,178 hectares) under agricultural activities which is about 34.7 percent of the total land area in the district. The extent under agriculture reported at the Census of Agriculture 2002 is 259,547 acres (15,037 hectares). This is about 37.2 percent of the total land area in the district and the increase of agricultural area during last 20 years is about 7 percent. The total population enumerated in the Census of Population 1981 was 640,952 while the corresponding figure at the Census of Population 2001 is 774,555 and this is an increase of about 20.8 percent during 20 years period.

Table: Population in 2001 and Extent under Agriculture in 2002

| DS Division | Population 2001 (1) | Gross Extent in 2002 Extent- Acres (Small Holding and Estate Sector) | | | | |
|-----------------------|---------------------------|-------------------------------------------------------------------------|---------------|---------------|---------------|--------------------------------------------------|
| | | Under Agriculture (2) | Paddy (3) | Tea (2) | Rubber (2) | Coconut (2) % to total Agri. area |

| 13. Soranatota | 22,658 | 8,152 | 1,199 | 1,561 | 165 | 266 (3.3) |
| 14. Uva Paranagama | 76,282 | 18,870 | 4,000 | 5,161 | - | 267 (1.4) |
| 15. Welimada | 93,352 | 22,733 | 3,625 | 7,559 | - | 32 (0.1) |
| District Total | 774,555 | 259,547 | 58,788 | 75,043 | 1,018 | 8,915 (3.4) |

(1). Census of Population and Housing 2001 (2). Census of Agriculture 2002

(3). Asweddedumized Paddy Extent reported in PI for Maha Season 2002/2003

The predominant crop cultivated in Badulla district is Tea extending over about 75,043 acres (30,369 hectares) and it contributes to about 29 percent of the total area under agriculture. The other important crops cultivated in the district in order of extent are Paddy 58,788 acres (23,791 hectares) and Coconut 8,915 acres (3,608 hectares).

According to the Census of Agriculture 1982, reported extent under Coconut was about 2,186 acres (885 hectares). Coconut cultivation in the district has shown a fourfold increase during the last two decades. The aggregate extent under Coconut was about 8,915 acres or 3,608 hectares according to the Census of Agriculture 2002. About 63 percent of the Coconut area in the district is concentrated in two DS divisions namely; Mahiyanganaya and Rideemaliyadda.

About 38 percent of the Coconut area is matured and giving yield while the balance 62 percent is reported to be not yet in production

* Entire GN Division covered by "Estate Sector".

** Includes the estimated area covered by scattered coconut trees and excludes King coconut.

Annexure -1

Estimation Procedure – Extent under Coconut

Extent In-production:

| Item | Extent (acres) |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|
| <ul style="list-style-type: none"> • In the holdings more than $\frac{1}{4}$ acre where the extent under coconut can be reported in acres | a1 |
| <ul style="list-style-type: none"> • In the holdings more than $\frac{1}{4}$ acre where the extent under coconut cannot be determined but number of trees were reported. Then the extent has been computed dividing the number of trees by 60. (Assumed that the number of trees cultivated per acre is 60). | a2 |
| <ul style="list-style-type: none"> • In the holdings less than or equal to $\frac{1}{4}$ acre where the extent under coconut cannot be determined but number of trees were reported irrespective of status of production. Then the similar proportion of trees in-production and not yet in-production reported in the holdings more than $\frac{1}{4}$ in the same DS Division was used to estimate the number of trees in that category and divided by 60 to derive the extent. | a3 |
| <p>Estate Sector: This consists of two components</p> <ul style="list-style-type: none"> • In the estate sector holdings where the extent under coconut can be reported in acres | a4 |
| <ul style="list-style-type: none"> • In the estate holdings where the extent under coconut cannot be determined but number of trees were reported. Then the extent have been computed dividing the number of trees by 60. | a5 |
| <p>Likewise the total extent for a particular DS division was determined by taking the sum of above components i.e. (a1+a2+a3+a4+a5).</p> <p>Similarly the extent under not yet in-production was also computed.</p> | |

Acknowledgement

The contribution made by Ms. D.D.M.V. Perera, Senior Statistician and staff of the Agriculture and Environment Statistics Division including coding staff to extract the information pertaining to small holding sector and Mr. J. Dodamgoda, Senior Statistician, Mrs. K. Kannangara, Statistician, Mrs. W.P.J. Weerasinghe, Mrs. W.D.M. Srikanthie, Statistical Officers to process the data pertaining to Estate Sector and Mr. J.M. Wijekoon, District Statistician of Badulla assisted by the District statistical staff in extracting summary information is gratefully acknowledged.
