- * *MULLAITIVU DISTRICT***
- * *KILLINOCHCHI DISTRICT***

DEPARTMENT OF CENSUS AND STATISTICS

A Publication of Census of Agriculture 2002

Preface

This publication gives the estimated extent under coconut by Divisional Secretariat (D.S.) and Grama Niladari Divisions (G.N) in Northern Province comprised of administrative districts namely; Jaffna, Killinochchi, Mannar, Mullativu, and Vavuniya. This contains the statistics on coconut extent tabulated on the basis of scanning and data processing of questionnaires of the Census of Agriculture 2002. Therefore, these data supersede the figures given in district-wise publications issued earlier which were prepared based on the abstracts of Enumerators. It has been noted that some manual errors have been occurred in those summaries as such these data are to be treated as more accurate.

The total extent under Coconut reported for five districts in this Province at the Census of Agriculture 1982 was 24,776 acres in Jaffna (present Jaffna and Killinochchi) District, 2,918 acres in Mannar District, 5,449 acres in Mullativu District and 1,050 acre in Vavuniya District respectively with an aggregated figure for the entire province of about 34,193 acres or 13,838 hectares. The corresponding extent reported in the Census of Agriculture 2002 for these five districts was 8,536 acres in Jaffna District, 6,114 acres in Killinochchi District and 2,249 acres in Mannar District, 6,562 acres in Mullativu District and 1,921 acres in Vavuniya District respectively with an aggregate extent of 25,382 acres or about 10,271 hectares. As such, the decrease in the increase Coconut extent in the entire Northern Province is reported to be about 25% during last two decades. This decrease is mainly attributed to unsteady conditions on the ground and as a result, the crop was damaged and in many instances the holdings found to be abandoned and not operating during the Census time.

My sincere appreciation is due to Statistical Officers namely; Ms. T.R.D. Padmasiri and Ms. K.V. Dahanayake for compiling Statistical tables in this report under the direction of Mr. A.M.U. Dissanayake, Director in-charge of the Agriculture and Environment Statistics Division of the Department. The contribution made by District Statistical Staff in conducting the Census of Agriculture is gratefully acknowledged.

The data tabulations were performed by Mr. Migara Fernando, System Analyst/Programmer under the directions of Mrs. S.V. Nanayakkara, Director of Data Processing Division.

I hope this report would be of immense help to the planners especially who are working in the agencies related with the development of Coconut cultivation.

A.G.W. Nanayakkara
Superintendent of Census and
Director General of Census & Statistics

--	----

INTRODUCTION

1. **Background:** The statistical information given in this document is based on the data collected through the Census of Agriculture conducted in the year 2002. The Census of Agriculture is an Island-wide operation for the collection and derivation of statistical information on the Country's agricultural structure, using "Agriculture Holding" as the unit of enumeration. The entire operation is carried out under the Census Ordinance by the Government of Sri Lanka.
2. **Data:** In this Census, the scope and content was mainly focused on the items such as (a). Agricultural Holdings, (b). Agricultural Operators, (c). Crop Extent, (d). Livestock numbers, (e). Land utilization, and (f). Agricultural machinery and equipment.
3. **Method of Data Collection:** For the operational point of view the entire agricultural sector in the country was divided in to two sectors namely, (a) Estate or large holdings (b). Small Holdings.
 - Estate Sector was defined as operational holdings or units of 20 acres or more in extent operated by an Individual or group of persons under one operational status, such as on own account, in-partnership, for a private person, or for an institution. In the instances where different parcels of the holding may add up to 20 acres or more, if so it was not considered an Estate. Estate should have at least one parcel of which the extent 20 acres or more.
 - Small Holding Sector was defined as all holdings, which are not falling into the category of estates.

The trained Enumerators visited each and every census unit in order of the list of Housing units, Institutions, Collective living quarters, and Non-housing units and screened out for Agricultural Operators through a schedule known as "AC 1." They have been instructed to conduct personal interviews with respective operators and collect the specific information required for this Census. While in respect of the estate sector, the information was collected through a mail questionnaire, which was addressed to every Estate Operator/Superintendent in accordance with the inventory of Estates prepared prior to the Census.

4. **Content in this document:** The data relating to Coconut cultivation which was collected at the census have been summarized and given here. They appear as follows.

Small Holding Sector:

- Extent of land (holdings) reported less than or equal to 40 perches (1/4 of an acre) having agricultural output mainly for home consumption: As these are very marginal land for the agricultural point of view, extent under a particular crop cannot be determined. Therefore, the Enumerators were instructed to report the basic information like number of trees/Bushes/creepers as appearing in those holdings with out going in to detail classifications. In respect of Coconut the information was collected on the followings.

- (a). Number of Coconut trees (b). Number of King-coconut trees (both irrespective of production status).
- Holdings reporting extent more than 40 perches (1/4 of an acre) or producing agricultural output mainly for sale irrespective of land extent. The information was collected on the followings.
 - (a). Extent under Coconut viz. In-production, Not yet in-production
 - (b). If an extent under Coconut cannot be determined, then Number of scattered trees in-production, not yet in-production
 - (c). Number of King-coconut trees.

Note: Coconut extent by age was also collected but not analyzed here. However, they will be published in due course.

Estate sector:

- Similar information as in holdings above 40 perches.

(5). Limitations:

- It is important to note that the data given here on small holding sector by Grama Niladari divisions are based on the residence of the operators but not according to location of such holdings. However, at Divisional Secretariat division levels it is assumed that the difference between extent according to Operators' Residence and location of such holding are to be very marginal.

Note on this Publication:

- **This publication contains the statistics on Coconut tabulated on the basis of scanning of edited questionnaires of the Census of Agriculture 2002. Therefore, these data supersede the figures given in District-wise publications entitled "Status of Coconut Cultivation" issued earlier which were prepared according to the abstracts of Enumerators' Summaries. It has been noted that some manual errors have been occurred in those publications as such these data are to be treated as more accurate.**

Estimation Procedure – Extent under Coconut

Small Holding Sector: This consists of three components	
Item	Extent (acres)
<ul style="list-style-type: none"> • <i>In the holdings more than ¼ acre where the extent under coconut can be reported in acres</i> 	a1
<ul style="list-style-type: none"> • <i>In the holdings more than ¼ acre where the extent under coconut cannot be determined but number of trees were reported. Then the extent has been computed dividing the number of trees by 60. (Assumed that the number of trees cultivated per acre is 60).</i> 	a2
<ul style="list-style-type: none"> • <i>In the holdings less than or equal to ¼ acre where the extent under coconut cannot be determined but number of trees were reported irrespective of status of production. Then the similar proportion of trees in-production and not yet in-production reported in the holdings more than ¼ in the same DS Division was used to estimate the number of trees in that category and divided by 60 to derive the extent.</i> 	a3
Estate Sector: This consists of two components	
<ul style="list-style-type: none"> • <i>In the estate sector holdings where the extent under coconut can be reported in acres</i> 	a4
<ul style="list-style-type: none"> • <i>In the estate holdings where the extent under coconut cannot be determined but number of trees were reported. Then the extent have been computed dividing the number of trees by 60.</i> 	a5
<p><i>Likewise the total extent for a particular DS division was determined by taking the sum of above components i.e. (a1+a2+a3+a4+a5).</i></p>
