## Quality of life better in estates

## - Census and Statistics report

The Department of Census and Statistics has reported a significant reduction in poverty and improvement in the quality of life indicators in the estate sector, said the Planters' Association of Ceylon [PA].

The PA said that the latest data from the Department of Census and Statistics shows a marked improvement in estate sector living conditions.

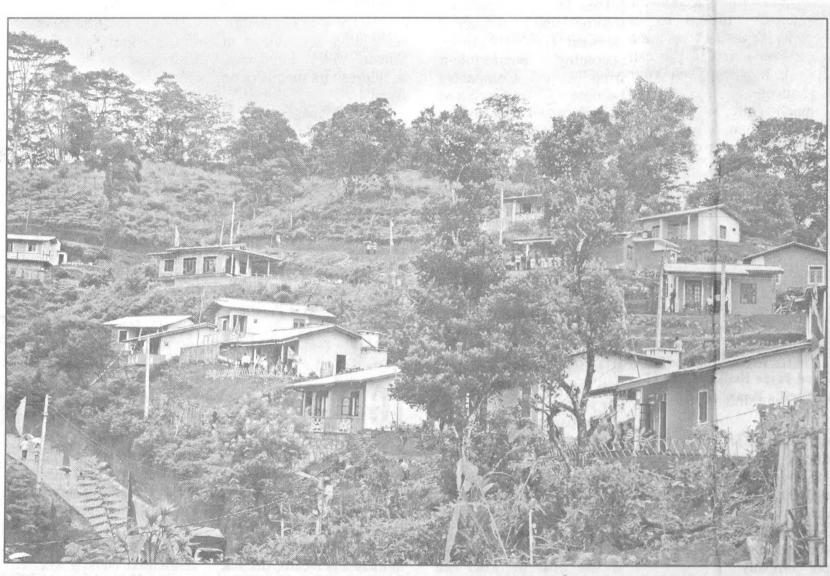

"Although the urban sector shows no significant reduction in poverty since 2006/07 to 2009, the estate sector has reported an unprecedented two third reduction of poverty," states the Department of Census and Statistics' in its preliminary Household Income and Expenditure Survey report 2009/2010.

"This is very good news coming from the Department of Census and Statistics, which is the national body for data collection.

This shows the improvements that have taken blace within the estate sector over the last decade.

We are very encouraged by these results and we will continue to work towards [1995/6]. improving the quality of life in estates," said Chairman PA, Lalith Obeve-

## Life indicators

The PA noted that other quality of life indicators such as the availability of essential facilities have also shown clear improvements in the estate sector.

Electricity was available to 62.3 percent of the estate sector in 2006/07. Availability of electricity increased to 84.0 percent of the estate sector by 2009.

Over half the estate sector [53.8 percent] did not have access to safe drinking water in 2006/07. By 2009 nearly two thirds of the estate population [65.1] percent] had access to safe drinking water. Housing facilities have also improved.

"Housing conditions have become better, due to various programs to improve existing housing and to build new housing for estate families.

At present estate families are given seven perches of land and access to credit,

percent, indicating that toilet facilities, while 20.5 estate populations have percent shared toilet facilities with another house-

> By 2009 the proportion of estate households with no toilet facilities had reduced sharply to 1.8 percent, while sharing toilet facilities with another household had reduced to 8.6 percent.

> facilities exclusively for the household increased from 67.7 percent in 2006/07, to 77.5 percent in 2009.

> Meanwhile, data from the Plantation Human Development Trust [PHDT] shows continued improvements in health indicators in Regional Plantation Company [RPC] estates.

> Birth of children in RPC estates have increased from 60.8 percent in 1985 to 92 percent in 1996 to 98 percent in 2010.

The PHDT says 97 percent of expectant mothers registered for antenatal care before 22 weeks of pregnancy in 2010 and immunisation of estate children is now almost 100 percent in RPC estates.

Infant and maternal mortality rates have reduced, while family planning and other related health servic- a considerable volume of Health and sanitation es have greatly improved work remains to be done

ratio had reduced to 49.5 of the estate sector had no tres in RPC estates with trained Child Development Officers.

According to the Department of Census and Statistics, school attendance, in the 5-20 year age group, in the estate sector, was 74.5 percent in 2006/07.

This figure [5-19 year age group] increased to 83.3 percent by 2009.

Although the share of Availability of toilet the estate population with no schooling was 15.8 percent in 2006/07 this had shrunk, to 8.8 percent, by 2009/10.

The share of estate population that had passed G.C.E.(O/L) increased from 3.4 percent in 2006/07 to 5.7 percent by 2009/10 and the share of G.C.E. (A/L) qualified and above, increased from 1.7 percent in 2006/07 to 4.2 percent by 2009/10.

These findings by the Department of Census and Statistics lay to rest the many unfounded allegations from various quarters that estate communities are deprived of basic facilities and essential services and are living in unhygienic conditions said the PA.

Despite the improvements hitherto effected, and the PA says it will con-Early child care and tinue to encourage RPCs have increased and by improve living and work-In 2006/07 according to 2010 there were 1,544 ing conditions within their
